Content:

How do I add a lesson that:

contains only media (video, audio, document, file, link);

contains only text;

contains media and text;

A. This would be a Text only type question. OR if all the pages in the lesson are for presentation only, then create the lesson as a Presentation type instead of an Exam type. Presentation type expects no inputs from the users.

You can add HTML code using various Editor plugins, but our system has 2 editor buttons, 1 is for the fileshare component, where you can add a link to a file that you have uploaded to the site and set the access permissions on it as to who can access the file.

The other is for adding amazon widgets and youtube videos.
